

Product Overview

Embarcadero Technologies provides award-winning tools for application developers and database professionals so they can design systems right, build them faster and run them better, regardless of their platform or programming language.

DATA ARCHITECTURE & MODELING

ER/Studio® Data Architect is the comprehensive data modeling tool that enables companies to discover, document and re-use data assets. With round-trip database support, data architects have the power to easily reverse-engineer, analyze and optimize existing databases. Common model import bridges easily migrate other tools' native formats into ER/Studio.

ER/Studio Data Architect Professional edition includes the model repository which provides a secure and scalable environment for model and object version management and team collaboration.

In addition to the Data Architect capabilities, the **ER/Studio Enterprise Team Edition** includes additional components and capabilities for business-driven data architectures:

ER/Studio Team Server provides a central hub for enterprise model and metadata collaboration, establishing the foundation for context, consistency, and compliance, and giving greater meaning to enterprise data for business decisions.

MetaWizard integrates other applications such as modeling, business intelligence and ETL tools by sharing metadata using import/export bridges with industry-standard exchange formats.

Business Architect is a process and conceptual modeling tool that enables business users and data architects to easily model and document the relationships between processes, people, and data.

Software Architect is an object-oriented modeling tool for database and application developers to visually analyze, design and implement complex application and data structures.

ER/Studio can be further enhanced with these companion products.

Viewer provides an interactive environment for accessing ER/Studio data models. This distributable application offers the same sophisticated navigational features of ER/Studio to team members that want advanced browsing and zooming capabilities but do not require the ability to edit the models.

Data Lineage helps users to graphically understand and interactively explore data lineage. Data management professionals obtain essential insight to the extracts, transformations and loads of complex enterprise data.

Universal Data Models are industry-specific data model templates that help data professionals reduce development time and improve consistency and standardization while achieving high quality models.

DATABASE MANAGEMENT & DEVELOPMENT

DB PowerStudio empowers DBAs and data professionals with comprehensive administration, development, performance and monitoring capabilities across multiple platforms. The tool suite complements native management tools with additional functionality that dramatically increases productivity, boosts database performance and improves availability.

DBArtisan provides DBAs a team-enabled database administration solution using integrated performance analytics & team sharing capabilities to maximize availability, performance, security and collaboration across multiple DBMSs. DBArtisan is the essential DBA toolset to dramatically lower costs and save time by leveraging performance insights to identify issues and pinpoint resolutions.

Rapid SQL® empowers database developers and DBAs to write more performant SQL using performance insights and embedded analytics. This game-changing toolset simplifies SQL scripting, query building, object management, debugging, and version control while gaining instant insights and recommendations on data-related performance issues such as cardinality and data skew.

DB Optimizer™ is a SQL optimization tool that maximizes database and application performance, reliability, and availability by profiling, tuning, and load testing SQL code. DB Optimizer helps DBAs and database developers eliminate performance bottlenecks by graphically profiling key database metrics, relating resource utilization to specific queries, and visually tuning complex SQL.

DB Change Manager™ ensures data consistency, organizational compliance, and data privacy by enabling DBAs and database developers to simplify, automate, and report on database changes. DB Change Manager's compare, synchronization, data masking, and auditing capabilities track and report on changes, streamline upgrades to new releases, and pinpoint performance problems.

Performance IQ (available for DBArtisan and Rapid SQL) plugs directly into DB Team Server and provides 24/7 wait-based monitoring and alerting including time travel performance analysis, reporting and analytics .

APPLICATION DEVELOPMENT

Build industrial strength and business-ready solutions incorporating multiple native client platforms, mobile extensions, smart devices, cloud services, and enterprise and embedded data.

RAD Studio® is the fastest way to build and update data-rich, hyper connected, visually engaging applications for Windows, Mac, Mobile, IoT and more.

Delphi® is the fastest way to build and update data-rich, hyper connected, visually engaging applications for Windows, Mac, Mobile, IoT and more.

C++ Builder® is the fastest way to build and update data-rich, hyper connected, visually engaging applications for Windows, Mac, Mobile, IoT and more.

Appmethod enables developers to create fast apps fast with complete cross-platform app development to power the Internet of Things.

EMBEDDED & WORKGROUP DBMS

InterBase® is a full-featured, high performance, multiplatform and scalable relational database for developers who are looking to embed a low-cost, zero admin, lightweight database into their Windows, OS X, iOS and Android applications. With InterBase you get powerful access control, disaster recovery and journaling and support for popular database drivers for increased deployment flexibility.

COMPREHENSIVE TOOLBOX

Embarcadero® All-Access® is the industry's only on-demand, multi-platform tool chest for data management professionals and application developers.
